# **USING THE AMA FORMAT**

The AMA format is widely used for citing sources in medical research. This information, created by the American Medical Association, is taken from AMA Manual of Style: A Guide for Authors and Editors (10<sup>th</sup> Edition). For additional guidelines, please consult the manual at the Client Services Desk of the Medical Sciences Library.

## CITATIONS IN THE BODY OF THE PAPER

Cite each source in numerical order using superscript Arabic numerals (1, 2, 3...). Put these numerals *outside* commas and periods, and *inside* semicolons and colons (see examples below). Put a comma (no space in front) between the numbers for multiple citations (see Example 2). Join a closed series with a hyphen (see Example 3).

Example 1: A review of regulations has been complete by the WHO. 15

Example 2: The data were as follows 3,4:

Example 3: As previously reported, 11-14,25

#### CITATIONS IN THE REFERENCE LIST

At the end of the document, list references numerically in the order by which they were cited in the text. Single-space within citations and double-spaces between citations. (Cite references parenthetically in the text if a work is not yet accepted for publication or is a personal communication. See *AMA Manual of Style*, 10<sup>th</sup> Edition, for more specifics.)
